The importance of postoperative care to your surgical site cannot be over si your surgical wound is extremely important to the success of the procedure	iressed. The care you take of yourself and and to your recovery and well being.
There are several things that could happen following surgery.	
Bleeding: Bleeding can occur following surgery. To reduce the possil	bility of bleeding, the following instructions
are given:	talan eraka dari dari dari dari dari dari dari dar
a Limit activities for at least 24 hours	
b. Keep the operative site elevated (if appropriate) c. If surgery was on the face, head or neck:	
i avoid stooping or bending	
:: avoid straining to have a howel movement	
iii. sleep with your head and shoulders elevated on extra pillows	
Should bleeding occur, apply firm constant pressure on the banda	ge for 20 minutes!! That will usually
stop minor bleeding.	
2. Swelling: Swelling occurs because surgery has caused a wound and	your body reacts to that injury. To reduce
2. Swelling: Swelling occurs because surgery has caused a way the amount of swelling that may occur:	"baggy".
Apply on ice had for 20 migutes each hour during the Waking nodes	. Il you do not have an los sug, s say
filled with cracked ice and wrapped with a thin towel will do nicely. b, Keep your bandage dry.	
	Changth Tylonol will relieve any pain
3. Pain: Pain, postoperatively, is generally slight. In nearly all cases, Ex	tra Strength i yierioi wiii relieve diry paiss
you may experience.	
4. Infection: Infection seldom occurs when the wound care instructions	have been carefully followed.

Wound Care - Two Times Each Day	
Wash your hands with soap and water.	to suture line with cotton ball or Q-Tip
2 Apply Hydrogen Peroxide and water (half and half) or	
to remove crusts from wound. 3. Dry wound thoroughly with clean soft cloth by blotting.	
4. Apply thin layer of antibiotic ointment with Q-Tip.	
5. Cover with clean dry dressing	
Signs of infection are: Increased pain, swelling, redness or yellowish	drainage several days after surgery.
This will doored	se as healing progresses but redness
There will be a scar and redness in the scar after surgery. This will decrea should be expected as long as six months. Everyone heals differently and individual's ability to heal. In other words, some scars heal and can hardly tender. Because of the unpredictability in wound healing, the final appearant therefore, no guarantees can be implied or stated as to the final appearance.	be seen while others become thick and/or ince cannot be preoperatively ascertained,
Special Instructions:	
1. Limit activities for at least 24 hours	
 Keep head or surgery site elevated If bleeding occurs, apply constant, firm pressure: call if bleeding doesn 	n't stop
 4. Apply ice bag for 20 minutes of each hour during waking hours on ope 	rative day
5 Take Extra Strength Tylenol it pain is presery	
6. Follow instructions for wound care	of infection occur Ph#
7. Notify our office immediately should bleeding that will not stop of egy-
